1 Objectives of the testing standards

The testing standards for online betting are set out to ensure that the gambling functionality of the gambling system operates in a suitable manner. The presentation of gambling functionality towards the customer can be distorted if the functionality does not operate in a manner that is true to what the customer can rightly expect. Therefore, the gambling system's gambling functionality shall be tested to ensure that it operates in a manner consistent with what is being presented to the customer.

1.1 Scope of this document

Requirements on how testing organisations obtain accreditation for conducting certification of the gambling system, business processes and business systems of the licence holder have been specified as well as requirements on how often certification shall be done. These requirements are described in section 2 "Frequency and testing organisations".

The random number generator(s) in the gambling system of the licence holder shall be tested to ensure that they are truly random and that the games are running independently from the device of the customer. Furthermore, it shall be tested that games without stake does not distort the customer's impression of the chance to win is also required. These tests are described in section 3 "Requirements for the testing of gambling functionality".

1.2 Version

The Danish Gambling Authority continuously revises the certification programme. The latest version and the version history are accessible at The Danish Gambling Authority's website.

Date	Version	Description
2014.07.01	1.0	A new document structure than the previous version 1.3 alongside with a range of updates in different areas. A new version 1.0 is therefore published. It is the intention to follow normal versioning for future changes.
2015.12.21	1.1	Changes completed to implement requirements for betting on horse and dog races in the certification programme.
2018.01.01	1.2	Changes completed because of liberalization of online bingo, betting on horse- and dog races and betting on pigeon races.
2020.01.01	1.3	Spillemyndigheden has removed the requirement saying the ATO's accreditation must refer to a specific version cf. section 2.2.
2022.xx.xx	2.0	

When a new version of the certification programme is released, The Danish Gambling Authority will, if necessary, publish guidelines for a transition period and validity of already completed certifications.

It must be emphasised that only the Danish version is legally binding. The English version holds the status of guidance only.

1.3 Applicability

Testing Standards for Online Betting are applicable for offering of:

- Online betting (§ 11 in the Danish Gambling act)

Testing Standards for Online Betting are not applicable for offering of:

- Local pool betting (§ 13 in the Danish Gambling act)

2 Frequency and testing organisations

2.1 Certification frequency

The licence holder is responsible to ensure to be certified in accordance with the requirements in this document with an interval of maximum of 12 months.

2.1.1 Initial certification

The licence holder must, as a rule, be certified before a licence to offer games can be issued, unless The Danish Gambling Authority has informed otherwise. See section 2.1.3 in the general requirements for further information.

2.1.2 Renewed certification

The licence holder must, as a rule, have completed a new certification within 12 months of the latest certification. The standard report must reflect when the certification has been renewed.

The standard report, which documents the renewed certification, must be in the Danish Gambling Authority's possession no later than two months after the certification was done.

A renewal of the certification may be based on sampling, spot checks and compliance with the requirements set out in the document "SCP06.00.DK - Change Management Programme".

2.1.2.1 Postponement of renewed certification

The licence holder can choose to postpone the certification up to two months from the time where a new certification should have been completed. The new certification must be finalised no later than 14 months after the latest certification and the standard report must be submitted to The Danish Gambling Authority within the same deadline.

The Danish Gambling Authority must be notified before the certification is postponed.

The deadline for renewal of certification is shortened with the equally amount of time the former 12-month deadline has been postponed. Meaning that if you for instance make use of the maximum two months postponement, then the next certification is due 10 months later. The time for the next certification shall be reflected in the standard report.

The option to postpone the certification only applies to the licence holder. This means that the option does not apply to any suppliers the licence holder may have.

2.2 Accredited testing organisations

To ensure that the necessary qualifications are in place during the certification, the testing organisation and their staff shall fulfil the requirements in this section.

2.2.1 Requirements for accredited testing organisations

Testing organisations shall attain ISO/IEC 17025 accreditation based on the criteria described in the following sections. 'Spillemyndigheden's certification programme – SCP.02.03.DK' must appear from the accreditation scope.

The accreditation will be undertaken by DANAK, the Danish Accreditation Fund, or a similar accreditation body being covered by the multilateral agreement on reciprocal recognition of the European Co-operation for Accreditation or a member of the International Laboratory Accreditation Cooperation.

Documentation for the accreditation shall be enclosed with the certification. Alternatively, a link to the accreditation can be provided in the certification report.

2.2.2 Requirements for personnel who performs the certification work

The certification work shall be carried out by staff with sufficient qualifications cf. section 6 in ISO/IEC 17025, which means that the accredited testing organisation shall hire sufficiently qualified, competent, and experienced personnel.

2.2.3 Requirements for personnel who supervise and attest the certification

The execution of the certification work must be supervised, and the certification report must be certified by one or more persons who guarantee that the work has been carried out professionally. These persons must meet the following requirements:

- a) For the testing of the Random Number Generator the supervisor shall have a relevant master's or PhD degree or in other ways be able to prove relevant qualifications and have at least five years of professional experience in testing gambling systems.
- b) For the testing of other gambling functions, the supervisor shall have a relevant educational background or in other ways be able to prove relevant qualifications and have five years of professional experience in testing gambling systems.

See section 2.2 of the General Requirements for further information.

3 Requirements for the testing of gambling functionality

3.1 RNG Requirements

3.1.1 Random Number Generator suitability for functionality other than generating results

1	Functionality with an element of chance but not used for generating results shall be based on a certified Random Number Generator (RNG) and related functionality (seeding, mapping, shuffling, etc.). Guidance: E.g. This could be situations where a player buys a bet, where the gambling system chooses which bets are played on and / or the outcome of the individual bets.
2	The RNG shall be generally recognised as being a cryptographically strong source for drawing random numbers.
3	The RNG output shall pass the following statistical tests:

Spillemyndigheden's Certification Programme
Testing Standards for Online Betting

	<ul style="list-style-type: none"> • The DIEHARDER test suite • The NIST (National Institute of Standards and Technology) Statistical Test Suite, or • A similar test suite of the same level. <p>The tests shall be conducted on a data set, which the accredited testing organisation considers to be sufficient for securing statistical valid results.</p>
4	If the RNG is dependent on seeding, when using the RNG, no more numbers may be drawn on the same seeding than the number of numbers drawn on the same seeding during the statistical tests described under requirement 3.1.1.3.

3.1.2 Error control procedures

1	<p>In case of errors on the RNG output, including missing output, the RNG must be deactivated.</p> <p>Instructions: It is possible to switch to a backup RNG, provided that it complies with the requirements set for the RNG in this document.</p>
---	---

3.1.3 Seeding

1	The gambling system shall secure the RNG output by applying an appropriate and efficient method for seeding and re-seeding.
---	---

3.1.4 Security

1	<p>RNG output must be secured until used.</p> <p>Guidance: RNG output must not be transmitted unencrypted between RNG server and game server.</p>
2	<p>RNG output which is mapped and scaled for a symbol or an event shall be applied immediately and in accordance with the game rules.</p> <p>Guidance: This does not prevent games which temporarily change character while ongoing from being played in accordance with the game rules of these games.</p>

3.2 Game execution

3.2.1 General

1	<p>Games shall be independent of the characteristics of the customer's equipment and/or communication channel.</p> <p>Guidance: The game logic must thus be run in the game system and not on the player's equipment, which i.a. means that the gaming system may not use information about the customer or customers' equipment.</p>
---	---

3.2.2 Games without stakes

1	Games without stakes (free games, games for fun, trial games etc.) shall present the chance of winning in a correct and balanced way so as not to create an impression that the chance of
